Report on Java Workshop

A Workshop was organized on "Java" for the duration of 06-07-15 to 20-07-15. The duration of course was 15 days. This workshop was very helpful for student future. 50 students enrolled for the java workshop. Java is the most commonly used in programming language in world. It prepared the students for many open well-paying developers' jobs. Even though there is no competition between the programming languages, still Java is considered to be the best of the rest for its richness of information. As Java has been in existence for years, you can expect an easy answer of almost all queries that come to your mind. Therefore, you can solve all your problems at ease and develop your skills.

It is often said that the toolset of a language plays an important role in determining its success. Java enjoys an upper hand in this case, as the program comes with complete support for open source systems. Thus, users can find tools for almost everything he needs. There are several open source libraries to offer information on any topic related to Java programming. Also there are several communities to guide programmers in the right way.

Java will be a better choice for you. It is used in the maximum number of applications and researches are in progress to increase its scope further. Therefore, anyone, who learns this language, can expect a better career in the industry compared to any other language programmer. The free of cost availability of this language reduces the expenses of the companies, which is why most of them prefer to appoint professionals.

The main success behind JAVA is its rich API system. Java comes with a wide set of tools which is supported by Java's open source ecosystem and there is everything you'll need while working with Java. You don't need to pay any amount to write application in Java due to its open source nature. Java is an open source programming language which can be found easily in the internet at the official website of Java. There are among 10 million Java developers worldwide. Java community is growing continuously. Java is present on multiple forum platform like stack overflow, expert java programmers always helps the new ones.

Most of the learners and developers use Java in first priority as Java is easy to learn. With easy syntax, is easy to learn in a short span of time which is used to build useful applications.

Development is faster with JAVA, application development is far less costly, and the result is a robust application which is reliable, bug-free, and portable to any device or operating system. No other programming language except Java offers these features all wrapped in a package. Java is the most widely used programming language in the world. Java is easy to learn. It is one of the easiest languages to learn among languages which are truly useful.

Java is supported by high quality tools. These tools will make the job of learning the language easier and a lot more fun.

When it comes to building computer programming skills, learning java will take you way beyond the games of your childhood. Knowing java will be a clear advantage in student future career.

When students learn java, students are learning more than just a language. Because java is a technology platform with many interconnected capabilities that can give cutting-edge, in-demand job skills. In fact, java come in list of top ten most popular languages Java can take you where you want to go.

After the completion of the workshop, students become proficient in that language and they done mini projects that gives students deep idea about java. Before this workshop students have negligible knowledge about java, but after that workshop students become adept with this language.

REPORT OF WORKSHOP
ON
HTML, CSS, XML WORKSHOP
DATE
04-01-16 to 18-01-16

A workshop was organized on “HTML, CSS and XML for the duration of 04-01-16 to 18-01-16. It was offered once in a year. Time duration of the course was 15 days. 50 students enrolled in course. Student will be able to fine-tune their site's blog posts or even their whole theme.

Lots of websites use a content management system, like Word Press, which makes it possible for non-coders to add or edit content on the site. This is great, because even coders appreciate the 'separation of concerns' here. If you're editing content, you're just editing content. The theme and its underlying code remain safely untouched. Similarly, theme developers can update a theme's code safe in the knowledge that they won't be changing the site's content. If student are comfortable with some basic HTML and CSS, Student can switch to the 'Text' tab on the page or post editing screen and create whatever layout student wish. All these tasks become simple when you know the basics of HTML and CSS.

Students have the options of using a faster & safer 'static CMS' WordPress is not the only content management system (CMS) out there, of course. There are almost too many alternatives to count .Some of the alternatives work in a similar way to WordPress, but some are quite different. One of the very different kinds of CMS is Jekyll, a 'static site generator. The Jekyll documentation includes an installation guide. Because installing Jekyll involves using the Terminal (Mac) or Command Prompt (Windows), coding beginners may need to do some extra research or ask a more experienced developer for help. Once students first Jekyll site is set up, however, students see that the template files (e.g. for the header and footer of each page of your site) are written in HTML, and of course all the visual styling comes from CSS. Students can make their site as complex or as simple as they like, so even an HTML beginner can put together their own website (with a blog!) and easily manage its appearance & content. These foundations provide student with lots of pre-written CSS, so all, student need to do is add certain classes to your HTML elements and they'll be styled attractively. Student can then customize them further, if they wish. The advantages of a static site generator like Jekyll are fast load times, cost (hosting is free!), and security (there's no database that can be hacked). Jekyll is likely better for smaller sites, like your personal portfolio, but it's incredibly flexible and powerful. And the only code you need to know is a little HTML and CSS.

If students are using the web to promote a product or service, you'll find yourself in need of custom landing pages. Whether students using paid channels like Google Ad Words or Facebook ads to drive traffic or you're guest-posting on related websites or being interviewed on podcasts—custom landing pages are essential. A custom landing page allows student to greet new traffic with highly-relevant messaging. If students have created a web app and

submitted a guest post to a relevant technology blog, then you might want to offer the readers of that post a special deal if they buy your app straight away. Whatever you're promoting, you'll get better results with carefully-targeted images, text, video and call-to-action buttons.

Using custom landing pages, you can speak directly to different types of potential customer, showing that you understand their needs and pain-points and assuring them that your product is the best solution. You might even want to use your landing pages to disqualify certain prospects. If someone isn't in your ideal customer demographic, you might not want them to buy your product at all because they'll likely be dissatisfied. Custom landing pages are, overall, an essential part of digital marketing. And there are ways to make them without coding... but there is usually an extra cost to pay for this. The best way to avoid that cost is to learn just a little HTML and CSS. Once students know how to add text, images, video and appealing buttons to a page, Students all set. You could even create two versions of a landing page and set up an A/B testing service to see which one performs best. Once you've gained just a little bit of coding confidence, you'll find all kinds of options become available to you.

Students probably already know that students can right-click on any webpage and choose 'View Source' to take a look at its underlying code. However, for complete coding novice, there usually isn't much point doing this. If students spend an hour or two here and there learning some HTML basics, though, students will soon discover what all of these things are. These are interesting questions and the answers can vary. But over time, as you look here and there at other websites, you'll pick up all kinds of tricks for making websites look and behave in certain ways. And if students find some particularly impressive code somewhere, consider emailing the website owner to let them know. Web developers are always happy to find out that their work is appreciated. After the completion of the workshop, students become proficient in that language and they done mini projects that gives students deep idea about HTML, CSS, XML. Before this workshop students have negligible knowledge about java, but after that workshop students become adept with this language.
